DB Admin Tips

Initial DB Setup

```
/usr/bin/mysql_secure_installation
```

Change the root's password

```
ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyN3wP4ssw0rd';
flush privileges;
exit;
```

Tablespace Shrink

???????????????????? Tablespace ?????????????????????

```
mysql> OPTIMIZE table foo;
```

????????

```
#!/bin/sh

echo -n "MySQL username: " ; read username

echo -n "MySQL password: " ; stty -echo ; read password ; stty echo ; echo

mysql -u $username -p"$password" -NBe "SHOW DATABASES;" | grep -v 'lost+found' | while read database ; do
mysql -u $username -p"$password" -NBe "SHOW TABLE STATUS;" $database | while read name engine version
rowformat rows avgrowlength datalength maxdatalength indexlength datafree autoincrement createtime
updatetime checktime collation checksum createoptions comment ; do
if [ "$datafree" -gt 0 ] ; then
    fragmentation=$((($datafree * 100 / $datalength))
    echo "$database.$name is $fragmentation% fragmented."
    mysql -u "$username" -p"$password" -NBe "OPTIMIZE TABLE $name;" "$database"
fi
done
done
```

Mariadb Log ?????

????

```
$> cat /dev/null > /var/log/mysql.log  
$> mysqladmin -uroot -p flush-logs
```

?? logrotate ??????

1. ?? /etc/logrotate.d/mariadb?

```
/var/log/mariadb/*.log {  
    create 660 mysql mysql  
    notifempty  
    daily  
    rotate 5  
    missingok  
    minsize 1M  
    maxsize 100M  
    compress  
    delaycompress  
    sharedscripts  
    olddir archive/  
    createolddir 770 mysql mysql  
    postrotate  
        # just if mysqld is really running  
        if test -x /usr/bin/mysqladmin && \  
            /usr/bin/mysqladmin ping &>/dev/null  
        then  
            /usr/bin/mysqladmin flush-logs  
        fi  
    endscript  
}
```

2. ?? mysql ???????

```
$> vi ~/.my.cnf  
  
[mysqladmin]  
user      = root  
password  = YourPass  
  
$> chmod 0600 ~/.my.cnf
```

????

```
mysql> show processlist;
```

Id	User	Host	db	Command	Time	State	Info
3	root	localhost	webapp	Query	0	NULL	show processlist
5	root	localhost:61704	webapp	Sleep	208	NULL	
6	root	localhost:61705	webapp	Sleep	208	NULL	
7	root	localhost:61706	webapp	Sleep	208	NULL	

4 rows in set (0.00 sec)

```
mysql> show status like '%onn%';
```

Variable_name	Value
Aborted_connects	0
Connections	8
Max_used_connections	4
Ssl_client_connects	0
Ssl_connect_renegotiates	0
Ssl_finished_connects	0
Threads_connected	4 << active connections

7 rows in set (0.00 sec)

Connect with unix socket

```
# Locate the unix socket file
```

```
mysql -uroot -p -e "show variables like 'socket'"
```

Enter password:

Variable_name	Value
socket	/var/lib/mysql/mysql.sock

```
# Connect to DB without password via unix socket
```

```
mysql -S /var/lib/mysql/mysql.sock -u root
```

User Management

??????

```
-- List All users
select host,user from mysql.user;

-- Check the privileges for specified user
SHOW GRANTS FOR 'user'@'host';
SHOW GRANTS FOR 'admin'@'%';
SHOW GRANTS FOR 'vivek'@'10.147.164.0/255.255.255.0';
```

????

1. **Data USAGE privileges** includes: SELECT, INSERT, UPDATE, DELETE, and FILE
2. **Structure privileges** includes: CREATE, ALTER, INDEX, DROP, CREATE TEMPORARY TABLES, SHOW VIEW, CREATE ROUTINE, ALTER ROUTINE, EXECUTE, CREATE VIEW, EVENT, and TRIGGER
3. **Administration privileges** includes: GRANT, SUPER, PROCESS, RELOAD, SHUTDOWN, SHOW DATABASES, LOCK TABLES, REFERENCES, REPLICATION CLIENT, REPLICATION SLAVE, and CREATE USER
4. **SSL privileges** includes: REQUIRE NONE, REQUIRE SSL, REQUIRE X509
5. **ALL PRIVILEGES**: Shortcut to grants all privileges to a mysql user account.

???? superuser ??

```
CREATE USER 'admin'@'%' IDENTIFIED BY 'the_secure_password';
-- Or
CREATE USER 'admin'@'10.147.164.0/255.255.255.0' IDENTIFIED BY 'the_secure_password';

GRANT ALL PRIVILEGES ON *.* TO 'admin'@'%';
-- Or
GRANT ALL PRIVILEGES ON *.* TO 'admin'@'10.147.164.0/255.255.255.0';
```

??????? DDL

```
SHOW CREATE USER admin;
SHOW CREATE USER vivek;
```

????

```
REVOKE ALL PRIVILEGES ON *.* FROM 'user'@'%';
```

Table Management

Table's DDL

```
show create table <table_name>;
```

Copy Table without data

```
create table new-table like old-table;
```

SQL

DB Administration

- [20 mysqladmin Commands for MYSQL/MariaDB Database Administration](#)

Synchronize DBs

- [Synchronize databases more easily with open source tools | Opensource.com](#)
- [Apache SeaTunnel | Apache SeaTunnel](#)

Installation

Install on CentOS 7

URL:

https://downloads.mariadb.org/mariadb/repositories/#mirror=mephi&distro=CentOS&distro_release=centos7-amd64--centos7

/etc/yum.repos.d/MariaDB.repo

```
# MariaDB 10.5 CentOS repository list - created 2021-05-08 02:51 UTC
# http://downloads.mariadb.org/mariadb/repositories/
[mariadb]
name = MariaDB
baseurl = http://yum.mariadb.org/10.5/centos7-amd64
gpgkey=https://yum.mariadb.org/RPM-GPG-KEY-MariaDB
gpgcheck=1
```

????

```
yum install MariaDB-server MariaDB-client
```

Starting MariaDB

```
systemctl start mariadb.service
systemctl enable mariadb.service
systemctl status mariadb.service
```

Securing MariaDB

```
mysql_secure_installation
```

OS Optimization

Linux Kernel Settings – IO Scheduler

```
# A temporary change can be done by issuing the following command
echo noop > /sys/block/sda/queue/scheduler

# To make it persistent, you'll need to configure it in GRUB's configuration
# file as shown below in /etc/default/grub , rebuild GRUB, and reboot the system.
GRUB_CMDLINE_LINUX_DEFAULT="quiet splash elevator=noop"
```

Resource Limits – Open Files Limit, Core File Size

```
# /etc/security/limits.conf
mysql soft nofile 65535
mysql hard nofile 65535
mysql soft core unlimited
mysql hard core unlimited
```

Configure Swappiness

```
# /etc/sysctl.conf
vm.swappiness = 1
```

Filesystem Optimizations

```
# /etc/fstab
/dev/sdb /var/lib/mysql ext4 defaults,noatime 0 0
```

DB Optimization

Backup & Restore

Backup

Script#1:

```
#!/bin/bash

# 环境变量
mysql_user="USER" #MySQL 用户
mysql_password="PASSWORD" #MySQL 密码
mysql_host="localhost"
mysql_port="3306"
mysql_charset="utf8" #MySQL 字符集
backup_db_arr=("db1" "db2") #数据库名称 ("db1" "db2" "db3")
backup_location=/var/www/mysql #备份目录 "/" 后面跟完整路径
expire_backup_delete="ON" #备份过期删除 ON 开启 OFF 关闭
expire_days=3 #过期天数 expire_backup_delete 开启

# 备份时间
backup_time=`date +%Y%m%d%H%M` #备份时间
backup_Ymd=`date +%Y-%m-%d` #备份年月日
backup_3ago=`date -d '3 days ago' +%Y-%m-%d` #3 天前
backup_dir=$backup_location/$backup_Ymd #备份目录
welcome_msg="Welcome to use MySQL backup tools!" #欢迎消息

# 检查 MySQL 是否运行,mysql 是否安装
mysql_ps=`ps -ef |grep mysql |wc -l`
mysql_listen=`netstat -an |grep LISTEN |grep $mysql_port|wc -l`
if [ [$mysql_ps == 0] -o [$mysql_listen == 0] ]; then
    echo "ERROR:MySQL is not running! backup stop!"
    exit
else
    echo $welcome_msg
fi

# 备份 mysql 数据库
```

```

mysql -h$mysql_host -P$mysql_port -u$mysql_user -p$mysql_password <<end
use mysql;
select host,user from user where user='root' and host='localhost';
exit
end

flag=`echo $?`
if [ $flag != "0" ]; then
    echo "ERROR:Can't connect mysql server! backup stop!"
    exit
else
    echo "MySQL connect ok! Please wait....."
    # ████████████████████████████████████████
    if [ "$backup_db_arr" != "" ];then
        #dbnames=$(cut -d ',' -f1-5 $backup_database)
        #echo "arr is (${backup_db_arr[@]})"
        for dbname in ${backup_db_arr[@]}
        do
            echo "database $dbname backup start..."
            `mkdir -p $backup_dir`
            `mysqldump -h$mysql_host -P$mysql_port -u$mysql_user -p$mysql_password $dbname --default-
character-set=$mysql_charset | gzip > $backup_dir/$dbname-$backup_time.sql.gz`
            flag=`echo $?`
            if [ $flag == "0" ];then
                echo "database $dbname success backup to $backup_dir/$dbname-$backup_time.sql.gz"
            else
                echo "database $dbname backup fail!"
            fi

        done
    else
        echo "ERROR:No database to backup! backup stop"
        exit
    fi
    # ████████████████████████████████████
    if [ "$expire_backup_delete" == "ON" -a "$backup_location" != "" ];then
        #`find $backup_location/ -type d -o -type f -ctime +$expire_days -exec rm -rf {} \;`
        `find $backup_location/ -type d -mtime +$expire_days | xargs rm -rf`
        echo "Expired backup data delete complete!"
    fi

```

```
    echo "All database backup success! Thank you!"
    exit
fi
```

Restore

How to Restore Large MySQL Database

When we restore a large database, usually we come across two errors as shown below: “MySQL server has gone away” & “Lost connection to MySQL server during query”

Here, we consider restoring a **16GB** database:

When restoring huge database, we need to set the values as specified below:

- connect_timeout = **3600**
- max_allowed_packet = **1024M**
- net_buffer_length = **1000000**
- wait_timeout = **86400** (which means 24 hours)
- interactive_timeout = **86400** (which means 24 hours)
- net_write_timeout = **3600**
- net_read_timeout = **3600**

```
mysql -u root -p -max_allowed_packet=1024M \  
-connect_timeout=3600 \  
-net_buffer_length=1000000 \  
-wait_timeout=86400 \  
-interactive_timeout=86400 \  
-net_write_timeout=3600 \  
-net_read_timeout=3600 \  
database-name < database.sql
```

Partition Table

Check if partition is supported

```
> show plugins;
```

Create partition table

```
create table mm_tx_new (  
  start_time  timestamp(6) not null default '0000-00-00 00:00:00.000000',  
  end_time    timestamp(6),  
  hostname    varchar(20),  
  servername  varchar(20) not null default 'noservername',  
  tx_id       varchar(15),  
  user_opi    varchar(20),  
  tx_resp     integer,  
  primary key(start_time,servername)  
) ENGINE=InnoDB DEFAULT CHARSET=utf8 COLLATE=utf8_unicode_ci  
PARTITION BY RANGE ( FLOOR(UNIX_TIMESTAMP(start_time)) )  
(PARTITION p202105 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2021-06-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202106 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2021-07-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202107 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2021-08-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202108 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2021-09-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202109 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2021-10-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202110 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2021-11-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202111 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2021-12-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202112 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2022-01-01 00:00:00.000000')) ) ENGINE =  
InnoDB,  
  PARTITION p202201 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2022-02-01 00:00:00.000000')) ) ENGINE =
```

```
InnoDB)
```

```
;
```

Check partition table

```
> show create table mm_tx_new;
```

Add new partition for specified table

```
ALTER TABLE `mm_tx_new` REORGANIZE PARTITION pMax INTO (  
    PARTITION p202501 VALUES LESS THAN ( FLOOR(UNIX_TIMESTAMP('2025-02-01 00:00:00.000000')) ) ENGINE  
= InnoDB,  
    PARTITION pMax VALUES LESS THAN MAXVALUE  
);
```

```
?: pMax ?????????? partition ?????????? pMax  
????????????????????????????????
```

Delete the partition

Purge the data in the specified partition

```
ALTER TABLE <schema.table> TRUNCATE PARTITION <partition-name>
```
