Cpu-AMD

http://www.amd.com/us-en/Processors/...1_9033,00.html

AMD™ Athlon™ 64, revision D or later

AMD Opteron™, revision E or later

?????????

AMD???-1

Compatibility Groups: AMD K8 Family

AMD K8 CPU Model	CPU Features	VI3 Groups		VC 1.x Groups
		32 bit	64 bit	
Rev C and earlier		A	n/a	A
Rev D	FFXSR	B	B	
Rev E	FFXSR, SSE3	C	C	
Rev F	FFXSR, SSE3, RDTSCP	D	D	
Rev G (no server class models exist)	FFXSR, SSE3, RDTSCP, PREFETCH	E	E	

Cpu-Intel

<http://processorfinder.intel.com/>

1 Way(Q9, Q6 , E6 , E8) 2 Way(Xeon)

Intel???-1

Compatibility Groups: Pentium 4 Family

Intel Pentium 4 CPU Model	CPU Features	VI3 Groups		VC 1.x Groups
		32 bit	64 bit	
Willamette, Northwood, Foster, Prestonia, Gallatin		A	n/a	A
Nocona Cedar Mill	SSE3	B		
Dempsey DP Irwindale Cranford	SSE3, NX	C		
Xeon 50xx (Dempsey MP) Xeon 70xx (Paxville) Xeon 71xx (Tulsa)	SSE3, NX, VT		C	

Intel???-2

Compatibility Groups: Intel Core Family

Intel Core and Core 2 CPU Model	CPU Features	VI3 Groups		VC 1.x Groups
		32 bit	64 bit	
Xeon LV (Sossaman) Yonah		A	n/a	A
Xeon 51xx (Woodcrest) Xeon 53xx (Clovertown) Xeon 32xx (Kentsfield) Xeon 72xx (Tigerton) Merom, Conroe	SSSE3	B	B	B
Xeon 31xx (Wolfdale) Xeon 52xx (Wolfdale DP) Xeon 33xx (Yorkfield) Xeon 54xx (Harpertown) Penryn	SSSE3 SSE4.1	C	C	C

????CPU??_???????

Why Are Some CPUs Not Compatible?

1?Example 3: Different CPU vendors

2?AMD and Intel CPUs have slightly different instruction sets

3?3DNow! only on AMD

4?PREFETCH instruction only on AMD

5?MONITOR and MWAIT instructions only on Intel

6?Different Model-specific Registers (MSRs)

7?Therefore: cannot VMotion from one CPU vendor to another

8?Even cold migration can be problematic: 9?Old Linux kernels use PREFETCH when installed on AMD

RAM

DDR 2(2G *4 no ecc)(1way intel and amd)

DDR 2 REG(4*2 or 4G)(2way amd)

DDR2 FB-DIMM(2* 2 or 4G)(2way xeon)

HD and Raid

1?Adaptec

2?Lsi

3?Other

4?Raid issue(raid 1 or 5)

SUPERMICRO® AMD Shanghai Server Solutions

The flagship enhanced quad-core Opteron™ processors based A+ Server solutions boast superb performance increase due to the L3 cache (6 MB), HyperTransport™ link technology, and DDR2 memory (up to 800 MHz) support. In addition, these A+ Servers are further enhanced with integrated Dual Dynamic Power Management (Split Power Plane), Dual HT (Hyper Transport) Links between CPUs, and high efficiency VRM design support. The A+ Shanghai quad-core processor server series is designed for better power and cost saving. It's excellent performance is ideal for a wide range of HPC applications.

A+ Server 1021TM-INF+B featuring H8DMT-INF+

- Shanghai-Ready Award-winning 1U Twin™
- Dual CPU with Dual HyperTransport Links
- System Up to 256GB ECC DDR2 Support
- 20Gbps Infiniband Controller Onboard
- 980W High Efficiency Power

A+ Server 1021M-UR+ featuring H8DMU+

- Shanghai-Ready Flexible UIO Platform
- Dual CPU with Dual HyperTransport Links
- Up to 128GB ECC Reg. DDR2 Support
- Universal I/O (UIO) Optional SAS/10GbE
- 650W High Efficiency Redundant Power

A+ Server 2041M-32R+B featuring H8QM3-2

- Shanghai-Ready Enterprise 4-way System
- Quad CPU with HyperTransport Links
- Up to 256GB ECC Reg. DDR2 Support
- Onboard SAS & High-Efficiency VRM Design
- 1200W High-Efficiency Redundant Power

Storage Choices for VI3

Share storage-?????

Isolate vs. Consolidate

- Poor utilization
- Islands of allocations
- More management

- Increased utilization
- Easier provisioning
- Less management
