Host setup manager

Core settings
Please specify core settings.

This GUI displays information provided by a core application.
Please specify the username, password, ip address and gui port of your core.

The optional host manager allows you to store core settings for multiple hosts.

Host settings: 10.10.10.125:4001

Host: Default = 127.0.0.1
 Port: Default = 4001
 Username: Default = admin
 Password: Default = <empty>
 Ask for password on connect
 Description: Default = <empty>
 Core protocol: Default = mldonkey

Default(127.0.0.1:4001)
 10.10.10.125:4001

Use ssh2 port forwarding tunnel (advanced option)

SSH host: SSH remote host:
 SSH user: SSH remote port:
 SSH pass: SSH local port:
 SSH port:

SSH forward http preview port

SSH local preview port: SSH remote preview port:

The screenshot displays the Sancho 0.9.4-59 (10.10.10.125) interface. The main window is titled "Downloads(1): 0 active, Paused: 1 (0 / 678.7 MB)". The interface includes a menu bar (File, View, Tools, Help) and a toolbar with icons for Transfers, Search, Servers, Shares, Console, Statistics, Friends, Rooms, and WebBrowser. The main area contains a table of download information:

Id	Network	Filename	Size	Downloaded	%	Sources	Avail	Rate	Chunks	ETA	Priority
1	Donkey	[MP3][精選]最愛情歌.rar	678.7 MB	0	0%	-	0%	Paused	0	-	No...

Below the download table is a section for "Uploaders: 0" with a table of upload information:

Network	Name	Software	UL	DL	Connected	Address	Port	Kind	State
---------	------	----------	----	----	-----------	---------	------	------	-------

The status bar at the bottom shows "Connected | 2.9.6 | 41" and network activity: "0.00 KB/s" (download) and "0.00 KB/s" (upload).
