

<http://blog.tenyi.com/2009/12/convert-from-vmkvhd-to-vdi-format.html>

VirtualBox VBoxManage

vmdk vhd vdi:

```
VBoxManage clonehd source.vmdk target.vdi --format VDI
```

**--format**

```
target (???) source ??????????
```

You are no longer needed to use vditool, the tool "VBoxManage" comes with recent revision VirtualBox.

Just type the command:

```
VBoxManage clonehd source.vmdk target.vdi --format VDI
```

**- format**

refers to the target format, source format seems to be automatically determined.

VirtualBox Command Line Management Interface Version 3.1.0

(C) 2005-2009 Sun Microsystems, Inc.

All rights reserved.

Usage:

```
VBoxManage clonehd <uuid>|<filename> <outputfile>
  [--format VDI|VMDK|VHD|RAW|<other>]
  [--variant Standard,Fixed,Split2G,Stream,ESX]
  [--type normal|writethrough|immutable]
  [--remember] [--existing]</other></outputfile></filename></uuid>
```

ESX ??? FLAT VMDK
