/**
```

## PageDirectory

creates a searchable directory of pages organized by tabs and filtered by tags

### Arguments:

`path` : str (optional, default: current page path)

page path the the parent page where the subpages to be organized are located

`most_popular` : map (optional, default: none)

show section for most popular pages that have a given tag

`tag` : str

tag to used for the split between left and right columns for most popular;  
left pages have the tag, right pages do not

`title` : str

title shown for left column

`tabs` : list (optional, default: empty list)

list of maps describing each tab to show; map entries may contain the following fields

`label` : str

label for the tab

`key` : str

key used to identify the selected tab

`featured_limit` : num (optional, default: 15)

number of pages to show in the "Featured" category

`cache_prefix` : str (optional, default: none)

when set, caches the page directory for a given view using this key

`tag_constraint` : str -or- list (optional, default: none)

only list pages that have all of the specified tags

```
*/
