

/***

PageDirectory

creates a searchable directory of pages organized by tabs and filtered by tags

Arguments:

path : str (optional, default: current page path)

page path the the parent page where the subpages to be organized are located

most_popular : map (optional, default: none)

show section for most popular pages that have a given tag

tag : str

tag to used for the split between left and right columns for most popular;
left pages have the tag, right pages do not

title : str

title shown for left column

tabs : list (optional, default: empty list)

list of maps describing each tab to show; map entries may contain the following fields

label : str

label for the tab

key : str

key used to identify the selected tab

featured_limit : num (optional, default: 15)

number of pages to show in the "Featured" category

cache_prefix : str (optional, default: none)

when set, caches the page directory for a given view using this key

tag_constraint : str -or- list (optional, default: none)

only list pages that have all of the specified tags

***/

// read parameters

```
var path = $path ?? page.path;
var most_popular = $most_popular;
var tabs = $tabs ?? [];
var featured_limit = $featured_limit ?? 15;
var cache_prefix = $cache_prefix;
var tag_constraint = $tag_constraint;
```

// check how the current page is being invoked

```
