

Troubleshooting TIPS

Log Files

????: /u01/app/oracle/ovm-manager-3/domains/ovm_domain/servers/AdminServer/logs/

- **access.log:** Used to track HTTP access to the Web interface of the Oracle VM Manager and to the underlying Oracle WebLogic Server HTTP interface. This log can be used to track access and HTTP operations within Oracle VM Manager to help debug access issues and to audit access to the Oracle VM Manager.
- **AdminServer.log:** Used to track events within the underlying Oracle WebLogic Server framework, including events triggered by Oracle VM Manager. This log can be used to track a variety of issues within Oracle VM Manager including TLS/SSL certificate issues, server availability issues, and any actions performed within Oracle VM Manager which are usually identifiable by searching for items containing the string com.oracle.ovm.mgr. Log in failures resulting from locked accounts (as opposed to incorrect credentials) are also in this file.
- **AdminServer-diagnostic.log:** Used to track exceptions within the underlying Oracle WebLogic Server framework, including particular events triggered by Oracle VM Manager such as log in failures due to incorrect credentials. This log can be used to track Oracle VM Manager behavior that results in an exception or for log in failure, which can be tracked by searching for the string An incorrect username or password was specified.

Log Parsing Tool: OvmLogTool.py

????: /u01/app/oracle/ovm-manager-3/ovm_tools/

?? AdminServer.log ?????????????????? log ???

cd /u01/app/oracle/ovm-manager-3/ovm_tools/

python OvmLogTool.py -s -o ~/ovm_logs/summary.`date +%y%m%d_%H%M`

????????????? ~/ovm_logs/summary.<today_now>
