=====from Alice

first download several programs:

1. eclipse-java-juno-macosx-cocoa-x86_64.tar

2. phonegap-phonegap-2dbbdab

3. android-sdk-macosx

(Eclipse) : Eclipse IDE for Java Developers

<http://www.eclipse.org/downloads/>

(SDK) : Eclipse ??? " Windows " IN "Eclipse" window/ Android SDK Manager.

JDK????????? <http://www.oracle.com/technetwork/java/javase/downloads/index.html>?

(AVD) : ? Eclipse ??? " Windows " ?????????? " AVD Manager " ???

(phoneGap) : <http://phonegap.com/download>

(refs)

http://docs.phonegap.com/en/2.0.0/guide_getting-started_android_index.md.html#Getting%20Started%20with%20Android

Setup New Project

1. Launch Eclipse, and select menu item **New Project**
2. Android/ Android Application project..
3. Then specify new application project (Name...)

- In the root directory of your project, create two new directories:
 - ? /libs
 - ? assets/www
- Copy **cordova-2.0.0.js** from your Cordova download earlier to **assets/www**
- Copy **cordova-2.0.0.jar** from your Cordova download earlier to **/libs**
- Copy **xml** folder from your Cordova download earlier to **/res**
- Verify that **cordova-2.0.0.jar** is listed in the Build Path for your project. Right click on the /libs folder and go to **Build Paths/ > Configure Build Path....** Then, in the Libraries tab, add **cordova-2.0.0.jar** to the project.

If Eclipse is being temperamental, you might need to refresh (F5) the project once again.

...

4. project(photogap?): Create a PhoneGap for Android Project..

?libs?????Build Path / Configure Build Path

?????Libraries??Add JARs??libs??phonegap.jar?ok

<!!!

? Android ?????????? AndroidManifest.xml ?????????????? AndroidManifest.xml ??

android:xlargeScreens="true" ???????

!!!>

?HTML source)

5. put new new.html under the file: “ assets/ www/ apis/ index.html “

<http://www.embeda.com.tw/tw/?p=3174>

(Servo ?????, ??? iPhone ?????!!)
