

Apache JMeter

Home: <https://jmeter.apache.org>

Requirement:

- Java 1.8+

Command Line

```
jmeter -n -t testplan.jmx
```

Pass parameters into the test scripts

```
jmeter -Jhost2=www.zzzyy.com -Jhost1=www.jmeter-rules.net
```

These values can then be read in the test plan using:

```
${__property(host1)}
```

```
${__property(host2)}
```

Webbench

```
?????30000????????????????????
```

```
?????
```

```
wget http://blog.s135.com/soft/linux/webbench/webbench-1.5.tar.gz
tar zxvf webbench-1.5.tar.gz
cd webbench-1.5
make && make install
```

```
?????
```

```
webbench -c 500 -t 30 http://127.0.0.1/test.jpg
```

```
?????-c ????-t ????
```

```
?????
```
