Install Fail2Ban on Debian

Installation

Download: <https://www.fail2ban.org/wiki/index.php/Downloads>

```
# Debian 7.x
tar xzf 0.9.2.tar.gz
cd fail2ban-0.9.2/
python setup.py install
```

Verify

```
fail2ban-client -h
```

Configuration for Asterisk

On Asterisk)

/etc/asterisk/logger.conf:

```
...
[logfiles]
...
fail2ban => notice,warning,security
```

Restart the logger on Asterisk

```
asterisk -rx "logger reload"
asterisk -rx "logger show channels"
```

On Fail2Ban)

/etc/fail2ban/jail.d/asterisk.conf

```
[asterisk]
enabled = true
logpath = /var/log/asterisk/fail2ban
```

```
maxretry = 5
bantime = 259200
```

Configuration for SSH

/etc/fail2ban/jail.d/sshd.conf

```
[sshd]
enabled = true
bantime = 7200
findtime = 900
maxretry = 4
```

Auto startup

```
cd fail2ban-0.9.2/
cp files/debian-initd /etc/init.d/fail2ban
chmod 0755 /etc/init.d/fail2ban
update-rc.d fail2ban defaults
```

Service start

```
service fail2ban start
```

Setup Logrotate

/etc/logrotate.d/fail2ban

```
/var/log/fail2ban.log {
    missingok
    notifempty
    size 30k
    create 0600 root root
    postrotate
        /usr/bin/fail2ban-client set logtarget /var/log/fail2ban.log 1>/dev/null || true
        /usr/bin/fail2ban-client reload 2> /dev/null || true
    endscript
}
```

FAQ

Q:?? Call Log ??????

““ Call from " (195.154.134.116:5071) to extension '8011441295298642' rejected because extension not found in context 'public'.

Ans??? Asterisk ? allowguest=no

?? sip.conf

```
allowguest=no
```

Apply the changes

```
#> asterisk -rx "sip reload"
#> asterisk -rx "sip show settings" | grep -i "Allow unknown access"
Allow unknown access: No
```

Fail2ban Setup

?????

???: ?? /etc/fail2an/jail.conf

```
# "ignoreip" can be a list of IP addresses, CIDR masks or DNS hosts. Fail2ban
# will not ban a host which matches an address in this list. Several addresses
# can be defined using space (and/or comma) separator.
ignoreip = 127.0.0.1/8 ::1 192.168.9.0/24 192.168.31.0/24
```

???: ?? `fail2ban-client`

```
# set <JAIL> addignoreip <IP>
# set <JAIL> delignoreip <IP>
fail2ban-client set sshd addignoreip 123.123.123.123
fail2ban-client set sshd delignoreip 123.123.123.123
```

????

```
fail2ban-client get <JAIL> ignoreip
fail2ban-client get asterisk ignoreip
fail2ban-client get sshd ignoreip
```

fail2ban command

?????

- [Commands - Fail2ban](#)

Cmd	Description
service fail2ban restart systemctl restart fail2ban	restart fail2ban service (after edit configuration)
fail2ban-client reload	restart fail2ban client
fail2ban-client status	get list activated jail
fail2ban-client status <JAIL> example: fail2ban-client status wplogin example: fail2ban-client status sshd	get <JAIL> status (the number of unsuccessful attempts and the list of banned IPs)
fail2ban-regex /var/lib/docker/containers/<CONTAINERID>/<CONTAINERID>-json.log /etc/fail2ban/filter.d/wplogin.conf	test regex wplogin
fail2ban-regex /var/log/auth.log /etc/fail2ban/filter.d/sshd.conf	test regex sshd
fail2ban-regex "line" "failregex"	test regex
fail2ban-client set <JAIL-NAME> unbanip <IP-ADDRESS>	manually unban IP
fail2ban-client set <JAIL-NAME> banip <IP-ADDRESS>	manually Ban IP
tail -f /var/log/fail2ban.log	view fail2ban logs
iptables -L --line-numbers	list IP blocked with line numbers
iptables -D <Jail-Name> -s <IP-ADDRESS> -j DROP Example: Jail-Name =f2b-wplogin Jail-Name =f2b-sshd	Unban IP
fail2ban-server -b	start fail2ban server
docker inspect --format '{{.LogPath}}' \$INSTANCE_ID	return instance log file path
fail2ban-client get <JAIL-NAME> ignoreip	Test ignoreip for JAIL

Check the version

```
fail2ban-client version
```

Check the Help

```
fail2ban-client -h
```
