

Linux Backup Tools

System Backup

Clonezilla

Clonezilla is a partition and disk imaging/cloning program similar to True Image® or Norton Ghost®.

- [Clonezilla - About](#)

Rescuezilla

Rescuezilla is an easy-to-use disk cloning and imaging application that's fully compatible with Clonezilla — the industry-standard trusted by tens of millions.

Rsnapshot

- **Rsnapshot** is a powerful backup utility with installation options on any Linux-based machine. It can either back up a machine locally, or you can back up multiple machines, say servers for instance, from a single machine. **Rsnapshot** uses `rsync` and is written entirely in Perl with no library dependencies.
