- GitHub: <https://github.com/slackhq/nebula>

## Chisel

Chisel is a fast TCP/UDP tunnel, transported over HTTP, secured via SSH. Single executable including both client and server. Written in Go (golang). Chisel is mainly useful for passing through firewalls, though it can also be used to provide a secure endpoint into your network.

## Tinc

Tinc is free and open-source VPN software that can be used to create mesh VPN networks. It is a small and powerful peer-to-peer VPN daemon that can be installed on multiple platforms. Tinc uses encryptions and tunneling for creating a secure private network between multiple hosts.

Requirement: ?? node ???? Public IP
